

GENERAL ASSEMBLY INSTRUCTION FOR A TABLE LAMP

IMPORTANT SAFETY INSTRUCTIONS:

This portable lamp has a polarized plug (one blade is wider than the other) as a safety feature to reduce the risk of electric shock. The plug is intended to fit into a polarized outlet in only one way. If the plug does not fit fully in the outlet, it should be reversed. If it still does not fit, it is recommended to contact a qualified electrician. The product should never be used with an extension cord unless the plug can be fully inserted. It is important not to alter or manipulate the plug, as it serves a safety purpose.

Do not plug in any power source before the assembly is completed.

1. Place the lamp - base (G) on a flat surface.
2. Insert the harp (C) into the saddle (F). *Note the saddle is preassembled to the socket (E).*
3. Place the shade onto the harp (C) and screw on the finial (A) to secure the shade into place.

Note:

The image of the lamp shown is for illustration purposes only to guide you through the steps of assembling the shade to the body of the lamp. Your purchased lamp will look different but the above steps will apply.
